Abstract: *The use of digital databases makes it possible to understand intellectual growth, research productivity, planning and identification of user information needs. Evaluating the effectiveness of user database resource utilization and research, the purpose of this study is to assist management in developing an excellent academic policy. In our college we introduce the digitillibrary facility to the student for access the accurate and relevant and update information and also to help to develop their curriculam aspect. We usually launch this website on 26-02-2022 since for that day students they express and analyze these websites so regarding this we will try bring the students impact in this article.*

Keywords: digital databases, research productivity, user information needs, academic policy, student impact

1. Introduction

E-libraries or digital Libraries are vast array of resources that aid students in expanding their knowledge, honing their research skills, and enhancing their academic performance. Digital libraries play an important for student's academic performance and achievement as a trustworthy source of information. The purpose of this survey is to find out how satisfied students are with the digital library resources and services offered by the academic library. To learn more about the issues and challenges that the student have when using digital library resources and how this affects their performance and success in colleges and a random survey was undertaken. According to the studys findings, there is a strong connection between using digital libraries and students' success and achievement. Library usage and the students' academic performance and success. The major finding of the study is to conduct the information literacy programme for the students to promote awareness about the resources, services and facilities available in the library so that the students can take maximum advantage of the benefits provided by the library Digital libraries have a significant impact on students, they enable efficient research and study, facilitate collaboration among students, and contribute to environmental sustainability.

Meaning:

A digital library is a collection of digital collections, such as books, magazines, audio recordings, video recordings and other documents that are accessible electronically.

Definitions:

A "digital library" basically known as the library resources are reconstructed to the traditional from to digital form.

A managed collection of information, with associated services, where the information is stored in digital formats and accessible over a network (Arms, 2000).

Further discussions with colleagues at the International Conference on Digital Libraries in New Delhi (December 2006) and at the American Library Association Midwinter meeting in Seattle (January 2007) produced a rich variety of input for discussion, but nothing definitive. A digital library turned out, like many dynamic social organisms, to be hard to pin down.

What these definitions have in common is the repeated emphasis on access to services and on content, which is sometimes called collections or documents or information or information objects. What they did not do was to provide sharper criteria for deciding whether, say, JSTOR was a digital library, or merely a valuable resource within a digital library collection

The digital library is the collection of services and the collection of information objects that support users in dealing with information objects available directly or indirectly via electronic/digital means (Leiner, 1998).

2. Objective of this study

The main objective of this study is to observe the digital library and its impact by the under graduate students of the women's college.

- To know the impact of digital library compare to traditional to digital library service
- To know the effective utilization of Digital library service among the students
- To know which option is very useful compare to other option.

- To try to collect the students opinion about the effect of digital and traditional library source.

The Impact of digital library compare to traditional Library Opinion by the BA and BCOM students:

S.no	Class	Total strength of the class	Parts of the Digital Library	Parts traditional Library	No of students Rating about the Digital Library and percentage	No of students rating about traditional Library
1	BA/Bcom	350	E-books	books	160(45-/-)	190(54-/-)
2	BA/BCOm	350	E-Journals	Journals	210(60-/-)	140(40-/-)
3	BA/BCOM	350	E-News Papers	Papers	300(85-/-)	50(14-/-)
4	BA/BCOM	350	E-magazines	Magazines	280(80-/-)	70(20-/-)
5	BA/BCOm	350	E-competitive exams	Competitive Books	310(88.57-/-)	40(11-/-)
6	BA/BCOM	350	e-maps	Maps and globs	185(52.85-/-)	165(47-/-)
7	BA/BCOM	350	E-Mac tests	Written test	320(91-/-)	30(8.57-/-)
8	BA/BCOM	350	E-question papers	Question papers	220(62.85-/-)	130(37-/-)

In this above table most of the BA/BCOM students they are much familiar to in traditional books compare to other e-books and in the context e-journals 60-/- percent students they are familiar apart from journals and also 85-/-percent students are much familiar in e-news paper compare to news paper. 80-/- percents students are use of e-magazine compare to magazines.90-/- percents student s are use the e-competitive exams books part form competitive exam books and also remaining most of the students are use the e-maps, e-mac tests, e-questions paper service apart from traditional maps-globs and written test and also e-question paper .

3. Limitations of this study

Problems faced by utilizers at the time of digital library utilization like lowconfiguration computers, insufficient space and its environment. The internet and the intranet are both networks that are important for the digital library [6]. The slow speed of internet connectivity leads to wasting the time of the user who wasn't able to gather a piece of appropriate information and access the e-packages. Adding more digital formats data leads to an increase in usage among the students. Lack of space is also a major reason for non-utilization. Improving their e-related content quality and proper computer setup with high-speed internet connectivity and reading space helps to attract students to utilize the digital library

4. Conclusion

Almost all traditional libraries are conserved into digital libraries. Libraries must redesign and improve the digital content delivery format-related services in the library utilizer's needs are high, so libraries should serve appropriate digital content to the users for their research-related studies and others. Impact, which is created by digital libraries, is much more impressive than printed materials. But, the digital library is part of the library, and users need both materials for reference, research etc., and the library must be updated and well equipped with those services to meet the needs of the users. Most of the libraries didn't have adequate space; computers and the lack of trained professionals are the main reason behind the non-utilization of the library. In this modern era, all products need some fame and advertisement to attract the utilizes, so libraries also need some marketing strategies and advertisements for their services. Most of the users responded that the non-availability of proper resources

creates non-utilization in the library. High-configuration computer systems, improvement in internet facilities, and the proper environment with supporting staff are the key factors to improve the digital library services in libraries. This kind of setup in the library creates much more attractiveness in the libraries.
