

Crafting Digital Dominance: The BJP's Social Media Strategy and Political Narrative Formation

Ram Chander

Research Scholar (NET - JRF), Deen Dayal Upadhyaya Gorakhpur University, Gorakhpur, U.P., India

Abstract: *This research paper explores the significant role of social media in shaping the political narrative of the Bhartiya Janata Party (BJP) in India. With the rise of digital platforms as powerful tools for political communication, the BJP has adeptly utilized social media to influence public perception, mobilize support, and advance its policy agendas. The research analyzes how the party's strategic use of platforms like Twitter, Facebook, and Instagram has transformed political campaigning and discourse. By examining key case studies, including election campaigns and major political events, the study highlights how social media has been employed to craft and disseminate the BJP's messaging, engage with voters, and counter opposition narratives. The findings reveal the dual-edged nature of social media as both a platform for democratic engagement and a tool for political maneuvering. This study provides a foundational overview of the study's insights into the intersection of social media and political strategy within the BJP, contributing to the broader understanding of digital politics in contemporary democracies.*

Keywords: Politics, Campaign, BJP, Election, Digital, Social media

1. Introduction

The rise of social media platforms in India is a response to wider socio-economic and technological shifts, such as the liberalization of the economy, widespread smartphone usage, low-cost internet access, and the digitalization movement among Indians. By making information accessible to all, facilitating real-time communication, and empowering individuals with the ability to engage in public debates, express their opinions, or hold elected officials accountable, these trends have been observed. Social media in India has undergone a significant transformation due to the wider socio-economic, technological, and political shifts over the past few decades. The rise of social media platforms like Facebook, Twitter, and WhatsApp in the early 21st century was not accompanied by their growing influence on Indian society and politics, particularly during India's democratization, liberalization process and digital revolution. The 1990s economic liberalization in India led to a surge in media plurality, technological innovation, and digital connectivity. A media revolution was triggered by the rise of satellite television, private radio channels, and the internet, which challenged the dominance in state-controlled newspapers, magazines, news organizations, online communities, podcasts, videos, audio recordings, video games, sound recordings (known as "red-bull"), web-based communication platforms, white-blowing theater screens, photojournalistic TV, music subscriptions - all things news related to education, journalism, sports, politics, medicine, etc. Mobile phones, smartphones and broadband internet democratized information access; citizens can now engage directly with issues of public concern and with political actors, rather than having to deal with traditional gatekeepers. In India, the shift towards digital empowerment through smartphones with more widespread availability, affordable internet data plans, and digital literacy initiatives has had a transformative effect on political engagement and public discourse. The democratization of information, communication between citizens and political figures, as well as the stimulation to diverse voices from across socio-political backgrounds, have been achieved through the use of social media. People have

gained the ability to engage in public debates, share their opinions, and hold elected officials accountable through the emergence of online activism, citizen journalism, or digital advocacy. The impact of social media on Indian politics was particularly evident during election campaigns, where political parties and candidates utilized digital technologies, data analytics, and targeted advertising to appeal to voters. Candidates utilized social media platforms to serve as virtual platforms for campaigning, enabling them to connect with voters, gather feedback on important policy issues, and gain support around various campaign themes. By leveraging multimedia content, viral campaigns, and social media influencers, political parties were able to reach out to tech-savvy young people, urban voters, as well as first-time voters in order to expand their electoral support.

The use of social media platforms has led to increased citizen participation, participatory governance, and grassroots activism in India. The use of Twitter town halls, Facebook Live sessions, and online petitions allows policymakers to gather inputs from citizens, promote transparency in decision-making processes, etc. Grassroots activists, civil society organizations and advocacy groups employ social media to campaign on issues such as social justice, environmental conservation, gender equality and human rights; or mobilize support and advocate for policy reforms. The democratization of information and increased citizen participation in Indian politics has been hindered by the rise of social media, which also contributes to issues such as misinformation, echo chambers, filter bubbles and online abuse. The absence of centralized platforms in social media ecosystems results in polarization, ideological separations, and the erosion of civic engagement, as individuals retreat into virtual spaces that prevent them from responding to voices and opinions. The digital age demands a comprehensive response to the opportunities and challenges presented by social media, including efforts to promote digital literacy, encourage responsible citizenship, and uphold democratic values. Finally, the role of social media in shaping politics in India is a reflection on an ever-changing landscape between technological progressivism and democratic/societal

transformation. In the face of social media's opportunities and challenges in the 21st century, India must establish a well - organized, diverse, and inclusive public arena to sustain democratic governance, civic engagement, advancement, promotion, awareness, participation, representation, recognition, advocacy, mediation, resolution, facilitation, dialogue, education, training, publicity and other aspects of life in society.

1.1 Emergence of Social Media and Its Impact on Politics

The advent of social media in the early 2000s marked a paradigm shift in the way information was disseminated and consumed. Platforms such as Facebook (launched in 2004), Twitter (2006), and YouTube (2005) revolutionized communication by providing new channels for individuals and organizations to share information and interact with audiences. Social media's ability to facilitate rapid, widespread dissemination of content, combined with its interactive features, quickly made it a significant tool in political campaigning and public engagement. The 2008 U. S. presidential election is often cited as a watershed moment for social media's role in politics, showcasing how digital platforms could be harnessed to mobilize voters and shape political narratives. This event set a precedent for future campaigns globally, highlighting social media's potential as a powerful tool for political influence.

1.2 The BJP's Political Landscape Before Social Media

The Bhartiya Janata Party (BJP), founded in 1980, evolved from the Bhartiya Jana Sangh, which was established in 1951. The BJP initially struggled to establish itself as a major political force, overshadowed by the dominant Indian National Congress (INC) and regional parties. The party's rise began in earnest during the 1990s, driven by the Ram Janmabhoomi movement and the subsequent rise of Hindu nationalism. The BJP's political strategy during the pre - social media era relied heavily on traditional forms of campaigning, such as rallies, print media, and television. Although these methods were effective, they lacked the immediacy and interactivity that social media would later offer.

2. The BJP's Embrace of Social Media

The BJP's strategic embrace of social media began to take shape in the early 2010s, particularly under the leadership of Narendra Modi. Modi's political ascent was closely tied to his innovative use of digital platforms, which significantly impacted the BJP's campaign strategies and public outreach.

The Bhartiya Janata Party was the first political party in India to understand and use the power of social media to mobilize public opinion. The Twitter profile of BJP leader Narendra Modi (then the Chief Minister of Gujarat) was created in 2009, while Congress leader Rahul Gandhi was waiting for 2015 to take over. on the floor. Cell or BJP social media Cell is a division of the Indian political party BJP that manages social media campaigns for the party and its members. Amit Malviya has been the director of the BJP IT Cell since 2015. According to the Washington Post, 150, 000 social media workers posted messages aimed at exploiting the fears of

India's Hindu majority across the vast network of WhatsApp groups. An investigation by the publicly funded news agency, Newslaundry, revealed the organizational structure of the IT unit: The general IT unit has 25 members in its core team headed by Roy. Each regional center managed 20 members and an IT team of 15 members in each of the 92 regions. Seven member teams worked at block levels. At the local, regional and assembly levels, the BJP has around 5, 000 workers. A team of 20 professionals - including artists, designers and cartoonists - created the team's content. The Indian Express reported that Amit Malviya, the head of the IT Cell, admitted that the NaMo TV channel was run by the IT Cell. The "Hindu Ecosystem" and its methodology are discussed in another 2021 article, as reported by Kapil Mishra, whose group was infiltrated by Newslaundry journalists. More than 20, 000 people have been formed on Telegram and are working in an organized way. A 'Twitter Team' was comprised of around 5000 people. Most of the volunteers joining these groups were male and had upper caste surnames. Weekly topics and articles were shared filled with "sample tweets"—links to written tweets where all the sender had to do was post the finished tweet. Fans were asked to send tweets at a specific time to create a Twitter storm with many tweets from WhatsApp and Telegram groups. Therefore, the common cause of BJP was spread on social media.

3. Case Studies

3.1 2014 General Elections:

- **Strategic Digital Campaigning:** The 2014 general elections marked a significant turning point for the BJP's use of social media. The party adopted a sophisticated digital strategy, leveraging social media to create a strong, personalized narrative around Narendra Modi. The campaign employed targeted ads, viral content, and direct engagement with voters to build momentum.
- **Modi's Digital Persona:** Modi's active presence on platforms like Twitter and Facebook allowed him to communicate directly with the electorate, bypassing traditional media filters. This approach helped him craft a compelling image as a modern, tech - savvy leader.

3.2 2019 General Elections:

- **Data - Driven Campaigning:** By the 2019 elections, the BJP had refined its social media strategies further. The party utilized advanced data analytics to target specific voter segments with tailored messages. This data - driven approach helped optimize campaign effectiveness and voter outreach.
- **Social media:** The BJP's dominance on social media platforms was evident in its ability to set the agenda and frame political debates. The party's use of digital tools extended beyond traditional campaigning to include real - time engagement and crisis management.

4. Social Media Strategies

4.1. Campaigning and Messaging: The BJP's use of targeted ads, hashtags, and viral content to reach specific voter demographics. The party's digital campaign tactics have

included high - profile social media figures and influencers to amplify their messages.

4.2. Voter Engagement: Interactive strategies like live chats, polls, and direct communication through social media channels. Analysis of how these methods have increased voter engagement and mobilization.

4.3. Counter - Narratives and Trolls: The role of paid social media armies and the use of misinformation to counter opposition narratives and manipulate public opinion (Gupta, 2021).

5. Impact on Public Discourse

5.1 Polarization

The role of social media in increasing political polarization and fostering echo chambers. Examination of how BJP's social media campaigns contribute to divisive narratives (Chakrabarty, 2022). The emergence of echo chambers, filter bubbles and ideological silos is a consequence of the decentralized nature of social media ecosystems where users are exposed to content that reinforces their preconceptions or biases (Nezha and Brdufi, Consequently, it may lead to political fragmentation and division of society; thus, it can also discourage civic participation and debate by drawing people into closed spaces that provide protection from the voices and opinions heard. The prevalence of hate speech, trolling, and harassment in the digital world contributes to the erosion of positive online dialogue and fosters a culture of openness.

5.2 Political Communication and Agenda Setting

The effectiveness of social media platforms in setting political agendas is due to its ability to spread messages among political parties, leaders, and activists, as well as to shape public narratives and mobilize support. The viral nature of social media increases the reach and influence of political discourse, allowing for rapid distribution across borders and reaching diverse audiences. Nevertheless, there are worries about the dissemination of misinformation, fake news, and propaganda, which can distort public discourse, manipulate perceptions, or undermine democratic norms (Saaida,

5.3 Citizen Engagement and Participatory Governance

Social media platforms enable citizen engagement and participatory governance through online consultations, feedback mechanisms, and public debate. By utilizing tools like MyGov India, Twitter town halls, and Facebook Live sessions, policymakers can gather inputs from citizens, raise awareness, address grievances among citizens (and increase transparency in decision - making processes). Citizens can use social media to establish grassroots movements, advocate for policy reforms, and hold elected officials accountable.

5.4 Democracy and Media Freedom

Effects on traditional media and democratic processes. The shift from traditional to digital media and its implications for media freedom and public discourse.

6. Analysis of the Bhartiya Janata Party's (BJP) View on Social Media's Role in Indian Politics:

The Bhartiya Janata Party (BJP) recognizes the enormous potential of social media as a transformative tool to shape political discourse and engage citizens. Their views, illustrated by various research studies, highlight the important aspects of social media's impact on Indian politics.

6.1 Communication and Development

For the BJP, social media is a dynamic means of communication and outreach (Zahra, 2023). Platforms like Twitter, Facebook and WhatsApp have revolutionized the ability of a group to communicate directly with people from different backgrounds and countries. This direct interaction enables real - time communication, effective communication and positive motivation of supporters. The BJP can effectively communicate its message, policies, and achievements to the electorate through these channels, which will help them establish a stronger bond with voters.

6.2 Electoral Campaigns and Voter Mobilization

By using social media, the BJP has effectively mobilized voters during their electoral campaigns. The party has leveraged data analytics, focused ad campaigns, and partnerships with influencers on social networks to enhance its campaign messaging and rally supporters. By utilizing innovative digital technology, viral campaigns, and multimedia content, the campaign has been able to connect with tech - savvy youth, urban voters, as well as first - time voters. This approach has significantly expanded the BJP's electoral base and contributed to its success in securing victories in various elections.

6.3 Citizen participation and participatory governance:

An important aspect of the BJP's approach to social media is its emphasis on citizen participation and participatory governance. The party sees social media as an important tool to reach out to citizens. Complaints handling and greater transparency in decision - making processes. Initiatives like Prime Minister Narendra Modi's Man Ki Baat radio program, virtual town halls and online polls show the BJP's commitment to effective governance and leadership. This will strengthen the sense of equal participation among the citizens and increase their access and participation in the government.

6.4 Counter - narratives and Messaging

In an era of misinformation and mass propaganda, the BJP has realized the importance of countering false information on social media. This is important in election campaigns and major political debates. For this purpose, the group has created social media cells, verification groups and digital volunteers. Their role is to monitor online chats, expose false information and ensure that correct information is provided to the public. By participating in this process, the BJP seeks to maintain the integrity of public discourse and the integrity of its messages.

6.5 Empowerment of Grassroots Activists:

One of the most important effects of social media in the BJP's strategy is to empower activists and party workers. These individuals become the digital ambassadors of the group and reinforce its ideas, initiatives and achievements at the grassroots level. The BJP's 'Digital India' campaign seeks to promote the political party by encouraging supporters to create user-generated content, interact with online communities, and mobilize support for its platform. By emphasizing the power of grassroots mobilization, we are creating a dynamic digital ecosystem for political activism and civic participation, which enhances the party's visibility and impact. According to the BJP, social media has transformed Indian politics and provided it with unprecedented opportunities for communication, engagement, and mobilization. Through the use of social media, the party has been able to communicate its vision effectively, engage with its supporters and engage in innovative ways with citizens. On the other hand, BJP also believes that it is necessary to ensure social media remains an integral part of India's democracy, development and social cohesion, by using principles of good public policy through responsible usage and effective use of regulations. Embracing the transformative power of social media, the BJP continues to shape and redefine the landscape Indian politics in the digital age.

7. Conclusion

Social media has become a crucial tool in shaping the BJP's political narrative, influencing public perception, and impacting democratic processes. The BJP's successful integration of social media strategies demonstrates the evolving nature of political campaigning in the digital age. In India, the rise of social media has inevitably brought about changes in political discourse and thus contribute to the transformation of democratic participation and governance, as well as electoral processes. The political arsenal is heavily reliant on social media, which serves as both a communication tool and coordinating agent for political parties, while also aiding in voter registration and grassroots organizing. India's political landscape is highly complex, as social media has played a crucial role in democratizing information access, encouraging citizen engagement through discussion, and drawing on the diverse socio-political perspectives of Indians. Various social media platforms have become essential tools for engaging in political discussions and communicating with voters, such as Twitter, Facebook, or WhatsApp. This study highlights a strategic approach to communication, outreach, and citizen participation in the social media strategy of the Bhartiya Janata Party. The BJP has recognized the power of social media to shape voters' minds and have used platforms to achieve electoral success during election campaigns. Inclusion in governance and responsive leadership are evident in initiatives such as 'Mann Ki Baat' and digital town halls, which demonstrate the party's dedication. But in addition to its benefits, social media also has downsides: Misinformation spread through online channels (MN), polarization by political parties (such as the BBC and ITV) and the creation of echo chambers. By working towards a common goal, the BJP is challenging false narratives and advocating for responsible usage, emphasizing

both ethical conduct and regulatory frameworks in the digital world. Finally, the historical context and analysis of the BJP's perspective highlight the pivotal role that social media has played in Indian politics. As India embraces the social media as a potential opportunity, it will prioritize efforts to increase digital literacy, promote responsible citizenship, and uphold democratic values. By harnessing the power of social media while mitigating the risks, India can pave the way for informed, inclusive and dynamic political discourse in the digital age. The BJP's approach is a sign of growing communication and politics and represents a new era in Indian politics created by the digital revolution.
